STACK

FRONTEND
React 19 · TypeScript · Next.js
Redux Toolkit · RTK Query
react-hook-form · Zod
Tailwind · Sass · Framer Motion
Vite · Turbo · pnpm

BACKEND & DATA
ASP.NET Core 10 · C# · MediatR
SQL Server · Dapper
Razor / MVC (legacy)

AI-AUGMENTED DEV
Claude Code · custom subagents
CLAUDE.md tiered knowledge
bases
Agentic adversarial review

TESTING & TOOLING
Vitest · Playwright (e2e + a11y)
Storybook · MSW
Azure DevOps · Git · CI/CD (YAML)
Figma · Jira

LANGUAGES

English C1 / fluent
Italian native
Arabic conversational

EDUCATION

Level 3 Diploma · Computing
HCUC, United Kingdom · 2021

Technical Diploma · IT
ITIS Leonardo da Vinci, Rome · 2014

ABOUT

Software Developer (Frontend specialist) with **3+ years of production experience**. Currently leading the React 19 / TypeScript rebuild of a hospitality e-commerce platform; recently shipped an **end-to-end Nexi payment integration** with idempotent state machine and S2S callback handling, and built an **AI-augmented engineering workflow** on Claude Code (custom subagents + tiered knowledge base) running adversarial review on the production codebase. Core stack: React, TS, Redux Toolkit + RTK Query, react-hook-form + Zod.

EXPERIENCE

Frontend Developer

Sep 2023 – Present

Sibylla S.r.l. — Rome, Italy

Sibylla Network

Mar 2025 – Present

React 19 · TypeScript · ASP.NET Core 10

- Took ownership of frontend on a greenfield hospitality / e-commerce platform, rebuilding it in-house after prior external development missed requirements; working alongside one backend developer.
- Built React + TypeScript app from scratch with Redux Toolkit + RTK Query: ~20 API modules, ~60 query/mutation endpoints, ~35 routes, ~12 feature areas across booking, checkout, payments, wallet and account.
- Designed form architecture with react-hook-form + Zod, normalising inconsistent legacy backend payloads; integrated JWT auth with refresh tokens and XSRF protection; autonomous task creation and frontend direction via Azure DevOps, UI from Figma.
- Shipped end-to-end Nexi payment integration: server-to-server callback, idempotent state machine (pending → nexi_paid → sibylla_confirmed | failed), MediatR fire-and-forget handler, and a PowerShell replay tool for debugging recurring callback races.
- Testing with Vitest (unit) and Playwright (e2e + a11y); managed CI/CD pipeline updates (YAML) and resolved pipeline-blocking issues.

AI-AUGMENTED ENGINEERING

- Built a suite of 5 read-only Claude Code subagents — adversarial code review, SOLID auditing, TS↔C# contract-drift detection, forensic payment-flow tracing — on the ASP.NET Core 10 / React 19 codebase; surfaced 3 latent payment-flow bugs on first run.
- Authored a 3-tier project knowledge base (root + frontend + backend CLAUDE.md) codifying domain glossary, payment state machine, and non-obvious gotchas; enables repeatable AI-assisted review under a minimal-permission sandbox.
- Implemented 4 SRP-scoped slash commands (/challenge, /audit-solid, /check-drift, /trace-payment) wrapping the agent suite to bring adversarial review inline with PR workflow.

Sibylla Platform

Sep 2023 – Mar 2025

ASP.NET MVC · Razor · jQuery

- UI on ASP.NET MVC with Razor (.cshtml) and JavaScript/jQuery; built a reusable CSS class system and shared JS utility files that became the team reference for new pages, reducing duplication and visual inconsistency across modules.
- Refactor: removed unused HTML/CSS/JS, standardised naming conventions; Jira + FileZilla for tracking and deployment.

Frontend Developer Intern

Oct 2022 – May 2023

BetterTogether S.r.l. — Rome, Italy

- Built front-end for automated invoicing (B2C / B2B2C) with HTML, CSS, JS and C# / ASP.NET MVC; integrated Aruba APIs for electronic invoicing; standardised UI and refactored legacy code.

PERSONAL PROJECTS

- laboratoire — pnpm + Turbo monorepo (TS strict, Node 24) with three React apps over a shared HeroUI-based component library (@laboratoire/ui, Storybook). Implements the same booking / checkout domain across two paradigms (Vite SPA + Redux/RTK Query and Next.js 16 Server Actions), sharing Zod schemas; idempotent order creation, cookie-gated checkout, EN/IT/FR i18n.
